Central Milton Keynes MK9 3BN(GB)(54) **Apparatus for measuring three-dimensional curved surface shapes.**

(57) A three-dimensional curved surface shape measuring apparatus of the slit light linear scanning type. In accordance with a composite image $u(x, y)$ produced by image composing means when a slit light is scanned over a surface of an object to be measured, a measured value or computed value $u_0(x, y)$ of a composite image with respect to a reference

plane, a light projecting angle θ to the reference plane and a reference plane-television camera distance a , a necessary computational processing is performed to determine a three-dimensional curved surface shape $f(x, y)$ of the surface of the object which is free of any distortions due to a perspective effect of the television camera.
